We specialize in delivering comprehensive and quality focused training that impacts the bottom line.

COMPREHENSIVE ORGANIZATIONAL NEEDS ASSESSMENT

We customarily conduct a training needs assessment that identifies and prioritizes your training needs objectives to ensure that your workplace training has the greatest impact.

CUSTOMIZED CURRICULUM DESIGN

Utilizing the results of the needs assessment, our expert instructional designers build a curriculum to address your training needs.

EFFECTIVE TRAINING MATERIALS

Our instructional designers and subject matter experts design and customize your training materials with the Experiential Learning Model in mind. Training participants receive their materials to utilize as a post training reference and resource tool.

PROVEN TRAINING MODEL

To maximize learning, our Experimental Learning Approach (ELA) utilizes a learner-focused system that encourages active participation through hands-on involvement with meaningful and relevant professional development skills practice.

EXPERIENCED TRAINER

Our training is professionally delivered by highly skilled, certified trainers with real world experience in their areas of professional expertise.

BOTTOM-UP APPROACH

We deliver training, not just to executives, but across all organizational levels. Our customized training ensures that all your employees receive a relevant and effective experience designed specifically for them.

ON OR OFFSITE FACILITIES

All of our services are offered onsite at your facilities. We can also provide facilities throughout the city and the metropolitan region for larger training sessions.

SUSTAINABLE EDUCATION SYSTEMS (SES)

We design and license training materials, provide train-the-trainer services, and offer program implementation consulting to ensure the long-term viability of your in-house training program.
